The interface of the program consists of a small and plain window in which you can set up a countdown timer till the shutdown event and then press the "Start" button to initiate it. But you can also log off or reboot your computer, as well as put it to sleep or hibernate mode. As we had expected, the simplistic program takes up an extremely low amount of system resources (which can be barely noticed), so Simple Shutdown Timer doesn't leave an impact on the computer's overall performance. There is no help file available but that's because Simple Shutdown Timer can be easily used by novices and experts alike. However, experienced users could be disappointed with the fact that Simple Shutdown Timer doesn't offer enough features for a power management software. For instance, you cannot turn off or restart your computer at a specific time or after you schedule an event (e.g. close or launch a program). Furthermore, you cannot change the program's behavior either (e.g. enable Simple Shutdown Timer to automatically run at system startup or disable it from minimizing to the system tray). All in all, Simple Shutdown Timer offers an immediate solution regarding power management functions and we recommend it to all users who prefer a straightforward application to a complex one.
