This interview first appeared in PS4 Pro Magazine issue 70. Mark "A Dark Room is a horror game where you're trapped in a pitch black room with a killer that's not only stalking you, but can also see you too. You use items from the environment, like a bookshelf, a ventilation fan, and a light switch to solve puzzles and battle the murderer, in a slow, methodical and tense atmosphere. "We want you to really feel trapped and alone, yet also witness the murderer lurking in the darkness. So you can never be completely sure what is going on. You have to carefully explore your surroundings, using light, sound and vision to solve the puzzle. You have to be careful and listen to your surroundings, as you never know when something is going to go wrong – and it's often the less obvious that's what brings down the player and makes them hit the panic button. "Designing A Dark Room was an incredibly fun experience for us. We really wanted a game that would be like no other, something unique, something we wanted to play. We want the player to feel isolated, even with the companion you can have, but also that you really do not have an escape route, that you d41b202975

Erica [2022]

Without any reservations, it would be hard to argue that Erica doesn't rule the roost.8.5/10 IGN (PS4 review)It was just a few months ago that games like these left my radar. Sure I still pick them up, but they

don't stick around. ERICA is a welcome reminder to the genre that there are still quality stories and storylines to be found.9/10 UKIE (PS4 review)Sometimes it feels like FMV games have been abandoned or forgotten about. ERICA gets it right by letting a genuine story create its own conflicts.10/10 Edge (PS4 review)An extraordinary series of striking images and events – until the very end, where the mystery thins out slightly. It's got a genuine kind of tension, and one that has to be borne for the duration of the game.8/10 Retro Gamer (PS4 review)While there are some faults, such as the load times, the real standout feature is the story. The main cast is engaging and filled with well-rounded characters, and the mystery is intriguing as you find out just how the story ends.9/10 PSM3 (PS4 review)Where other FMV games choose to focus on the tech, ERICA demonstrates the value of storytelling as a means of not only narrative, but characterisation.9/10 GameSpot (PS4 review)And it's that balance of the development that makes the FMV experience so exciting. ERICA never feels too stiff or forced, and you have to find it hard to play through any of the scenarios.8/10 GamesPulse (PS4 review)The game's plot is brilliantly conceived, engrossing, and feels tense to the end. You feel like an ally in this strange and dark world. ERICA, was just what the FMV was missing - at least until now. I recall the first time I played a FMV game. It was 1992, a terrible year for movies (i.e. The Bodyguard) and videogames (i.e. Super Mario Bros). I had seen previews for a game called Dracula's Curse, which promised a fictional version of the Count in the role of Count Dracula. I played it in July 1992 and the game had a lot going for it: a faithful portrayal of the role of Dracula, a charming cast of characters, a moody soundtrack, an atmospheric environment and a story which was surprisingly good. I was hooked

What's new in Erica:

Sara Kinsche, left, and Sierra Fontaine Morales of South Gate lead the City of Hope breast cancer walk on Sunday. Both women had their workouts from OAK-IN Fitness and Spintastic. (Octavio Ranieri/Los Angeles Times) Up and down the Los Angeles County medical system, Monday brought another sign of life among the outdated and, for years, seemingly deathly pieces of obsolescent technology. The “Echo Show,” a mobile outpatient ultrasound from Echosense Medical, was quietly humming away at two UCLA hospitals in Westwood. At City of Hope, a large Catholic hospital in Duarte, a dozen employees, and many more patients, gathered in the surgical wing for the cancer tests. Meanwhile, at Cedars-Sinai Medical Center in Hollywood, dozens of neck and head CT scans turned green or red, depending on the tumor and its location, in the Diagnostic Imaging Department. And at Cedars-Sinai, a school-age boy in the emergency room clutched a bloody red sock to his head. He was an accident victim. At present, the mobiles, the scanners, the hospital beds and the tubes of medicine are doing their work without help from state or federal dollars. But once, they were the best, and possibly the only, treatment for many of the 56,000 cancer diagnoses that Southern California hospitals treated in 2004 – the latest year for which statistics are available. States continue to pare Medicare and Medicaid payments, to prop up hospitals, and to limit the services they can offer patients. But there is remarkable new life

being generated within the creaky, half-dead science of oncology. A new, cheaper, noninvasive ultrasound that whizzed across the county in a doc's car might be just the beginning. In addition to identifying tumors before they spread, new diagnostic modalities — sent by FedEx or flown directly into a hospital — have the potential to boost cancer survival rates by 10 percent and save tens of thousands in health care costs over the long run. Miniaturized machines that can diagnose cancerous infections inside the human body are routinely arrived in U.S. hospital emergency rooms. Bioengineered cancer cells that can quickly reproduce and consume old, ineffective drugs or as yet to be developed agents to fight the disease are starting to show promise as a way to repurpose all sorts of medications.
